20-21 April 2004

LinuxUser and Developer Award Finalist 2004

Mart Technology is a finalist in the LinuxUser & Developer Expo Awards 2004. Its *Rich Web Business Suite* was selected in the category of "Best Linux Desktop Application".

This integrated web-based Business Suite handles:

- Quotations & Sales Orders
- Stock Management
- Purchasing & Delivery
- Picking & Dispatch
- Invoicing
- Management Information Reports

The application suite was built for Aerospheres (UK), a leading supplier of materials to the airline industry. Notably, the applications provide an extremely rich forms-based GUI (graphical user interface), yet are deployed over Aerospheres' intranet. The applications interface seamlessly with the company's existing accounting system.

This powerful suite of applications was developed and implemented within seven months by a team comprising one analyst and three developers using Mart Technology's revolutionary Linux-based rapid application development environment, MT Studio. One month after implementation, the customer felt sufficient confidence in the new systems to discontinue his old ones. The new systems run on Red Hat Linux and use Sybase's SQL Anywhere database.

By using its own RAD product, MT Studio, Mart Technology has been able to deliver these advanced rich web systems on a Linux platform at a fraction of the cost and far more quickly than would have been possible with any other development environment.

Ben Nemenyi, managing director of Aerospheres (UK) Ltd, said:

"Our business is complex. We must be able to send specialised materials quickly to anywhere in the world. With the system developed using MT Studio, I am able to offer my customers a level of service and sophistication that surpasses even that provided by companies the size of Boeing."

Notes to the Editor:

Mart Technology, a software developer and IT solutions provider based in Pinner, Middlesex was founded in November 1999 and began trading in April 2000.

MT Studio comprises a fully integrated RAD (Rapid Application Development) environment; a fast run-time application page server with built-in security and authentication, and a rich client-side graphical interface. With MT Studio, IT professionals can rapidly build and run functionally rich, data-intensive web-based applications.
